**Mini Project Title: KJSCE INTERNSHIP PORTAL - A PLACE FOR ALL INHOUSE
INTERNSHIP OPPORTUNITIES**

Resources Needed:

XAMPP , MYSQL ,BROWSER, PHP , HTML , CSS , PHPMAILER , BOOTSTRAP

❖ Project Description (introduction, motivation and objectives):

Introduction:

Intern123 is a platform which will provide students all the information of the internship opportunities available in the campus and at the same time will provide eligible interns to the professors of all colleges or campus companies. Students would be able to register and try participating in different internships. Professors and internship givers would be able to register and give opportunities to deserving students to work with them. Students will be able to track their internship credits which are given according to the number of internship hours completed.

Motivation:

The main motivation to develop this website was to provide a platform for all students to get to know all available internship opportunities in the college. Many times students face the problem of not getting internships and they fail to gain experience as well as the academic points. Even teachers/ job givers have many project ideas but they do not get proper candidates to complete the internship/projects.

Objective:

The main objective of this project is to smoothen the inhouse internship allotment process for the students by exposing them to all available opportunities ,managing their mandatory internship credits and thus giving equal chances to all. At the same time it will ease the hiring process for the job givers as the process of sending mails or messages will be handled by the administrator.

Scope:

In future we can let students to see the internships as per their preferences or filtering. Chat section can be used in future where students can chat with teachers/ admin to solve their doubts.

❖ Major web Functionalities with description**1. Simple registration and login process for students and Teachers:**

Students as well as the teachers will be able to Register and Login to the website to get access to apply for internships/ add internships.

After registering he or she can Login any time , the user according to its type i.e. student or teacher will be sent to its respective dashboard. We have used session handling to maintain the user credentials throughout the website.

The user can log out as well.

2. Three users admin, recruiter and applicant and their description.

There are 3 types of users i.e admin , recruiters(teachers) and applicants(students)

A) ADMIN:

Admin can login explicitly into his dashboard where he has information about all its users. He can view all students , teachers and internships available and list of students applied to internships.

Admin can **add, delete and update** information of students, teachers and internship details.

B) RECRUITER(TEACHERS):

Each teacher can add internships which they want to provide by filling the form and describing the internship.

Each teacher has his/ her own dashboard where he can see all internships he/she have added. Teachers can view all the students that have applied to their internship and their respective details and also can **download** their resumes.

Teachers can also view information about students they have selected for their internship.

Teachers can then choose eligible candidates from all the entries then by clicking accept and filing the form , which will send a **selection email to that candidate**.

Teachers can view his/ her profile page and can do the necessary changes in his/ her profile.

APPLICANTS(STUDENTS):

Students can see all the internships which are provided by the teachers. Students can view all the information of the interested internship and apply to the same by **uploading a resume**. Once applied it will be seen on his dashboard along with **status about his selection**. Students can also **view and edit** his profile.

3. CRUD OPERATIONS:

Create:

Admin can create new students , teachers and internship opportunities. Teachers can create new internships.

Read: Students can view all the internship and its details. Admin can view all the information as described above. Teachers can also view all the information.

Update: Admin , Students and Teachers can update all information, student profile and teachers profile respectively.

Delete: Admin has been given the right to delete users and internships.

4. Email:

Php mailer is used to send email selection/rejection mail to the candidates. Contact Us form also sends email to admin email where queries regarding any issues can be solved and mailed.

5. Home Page, About us and Contact Form:

Website has a homepage where the information about the website and contact form is displayed. Users can also get access to signup pages of respective type i.e. students / teachers.

Minor web Functionalities with description:

1. Users information according to their type is stored in different database tables.
2. All the registration forms are validated and if incorrect information is given as input the error is displayed.
3. If the username is already taken then an alert is displayed.
4. If you are a new user and you are trying to login without registering then you can get an alert.
5. If as a user you have forgotten the password then , you can update the password by clicking on FORGOT PASSWORD and then update it.
6. If you are logging in as a student then you are taken to the student page and if as teacher then you will be taken to the teachers page.
7. If a student has applied to 5 internships and if he is applying for the sixth then he gets an error that it can't apply for the internship.
8. If a student gets accepted to an internship then that internship details are not displayed in his/her dashboard.
9. Session is maintained throughout the page.

Output (screen shots of the web pages):

Outcome:

CO1: Illustrate use of basic PHP concepts to develop applications

CO2: Design forms and use session handling mechanism with web applications

CO3: Carry out database operations using PHP

CO4: Demonstrate the use advanced features such as REST API, email handling,

localization and internationalization in PHP

Summary:

Intern123 allows students to apply to all available internships and thus get the opportunities to all inhouse internship. Similarly all the teachers can get eligible candidates to their internships. Registering is important for accessing the website. Students can see all the available internships and teachers can give any kind of internships. In the above website we used MySQL database to store all kinds of information in different tables of the database and retrieve the information using proper php methods and queries at specific pages of the website. Php Mailer was used for smooth functionality for sending responses in terms of email. Session handling was used to maintain specific user credentials throughout the session. All the basic concepts of php , sessions , database creation and connectivity and advanced features were used and thus a website was developed.
